

Roto-Lock Photocell

Sternberg introduces a new concept
of roto-lock photocell usage:

1. Provides the ability to control your luminaire via a utility grade twist-lock photocell, rather than a button photocell.
2. Reduces cost by eliminating the need for a more expensive utility fitter under the luminaire.
3. PEC eye can be directionally adjusted in the field in 90 degree increments.
4. Allows use of a higher end PEC without any significant aesthetic change in the luminaire.
