

# LOW PROFILE GFCI IN USE COVER / BOX

Sternberg's **Low Profile GFCI in use cover/box** is a major improvement from the conventional GFCI designs prevalent today. Our new sleek, recessed design smartly camouflages the GFCI box ever so slightly, that its addition never interferes with the aesthetic designs of the various poles offered. The cover plate protrudes at a scant 1.36", while its housing is cleverly recessed in the pole and integrally welded.

- GFCI cover is designed to comply with NEC 406.8 receptacles in damp or wet locations.
- Cover and box are diecast aluminum construction.
- Designed to be used in all Sternberg 4" outside diameter or larger aluminum poles.

See spec sheets for complete technical information.
